

Retrieval

pull it out of memory

don't re-read it

Put the cards that fit here. Some fit two: argue about it.

Spacing

come back to it later

a gap, then again

Put the cards that fit here. Some fit two: argue about it.

Interleaving

mix it up

not one type at a time

Put the cards that fit here. Some fit two: argue about it.

Elaboration

ask how and why

connect it to what you know

Put the cards that fit here. Some fit two: argue about it.

None of the above

passive, however busy it looks

the bin

Put the cards that fit here. Some fit two: argue about it.

The fire safety quiz returns on day 1,
day 7 and day 30, like a sequel
nobody asked for.

4

The student explains to a teddy bear
why we check lying and standing
blood pressure.

9

Before handover, the charge nurse
fires three questions about
yesterday's teaching. Notes stay in
pockets.

1

Watch a 40-minute webinar at 1.5×
speed.

13

Six ECGs, but not all AF: AF, flutter,
and one heart that's just showing off.

7

A sticky note on the drug fridge:
“Max dose of paracetamol? Answer
under the flap.”

2

“Where could this work in your
teaching?” after each Menti
question.

11

These sessions: one week apart.

6

Highlight everything in yellow. Then
highlight the highlights in pink.

14

The Kahoot you did at the start of today.

3

“But why?” asked five times in a row about hand hygiene, toddler-style.

10

Drug calculations, shuffled: IV, oral and paediatric mixed together instead of one type at a time.

8

One question a week on the ward WhatsApp about last month's sepsis teaching.

5

Read the 47-page policy. Twice.

12

How to play

1. Lay out the four mats and the “None of the above” bin.
2. Cut out the 14 cards, shuffle them, and share them round the table.
3. Take turns: read your card aloud and put it on a mat. Some fit two: argue about it.
4. Four minutes. Then: which of these did you just do in the last 25 minutes?

1. R: Before handover, the charge nurse fires three questions about yesterday's teaching. Notes stay in pockets.
2. R: A sticky note on the drug fridge: "Max dose of paracetamol? Answer under the flap."
3. R + S: The Kahoot you did at the start of today.
4. S: The fire safety quiz returns on day 1, day 7 and day 30, like a sequel nobody asked for.
5. S: One question a week on the ward WhatsApp about last month's sepsis teaching.
6. S: These sessions: one week apart.
7. I: Six ECGs, but not all AF: AF, flutter, and one heart that's just showing off.
8. I: Drug calculations, shuffled: IV, oral and paediatric mixed together instead of one type at a time.
9. E: The student explains to a teddy bear why we check lying and standing blood pressure.
10. E: "But why?" asked five times in a row about hand hygiene, toddler-style.
11. E: "Where could this work in your teaching?" after each Menti question.
12. bin: Read the 47-page policy. Twice.
13. bin: Watch a 40-minute webinar at 1.5× speed.
14. bin: Highlight everything in yellow. Then highlight the highlights in pink.

R = retrieval · S = spacing · I = interleaving · E = elaboration. Card 1 is spacing too if the teaching was yesterday. Card 6 only works because each session opens with retrieval. Card 13: faster isn't more active. Card 14: highlighting feels productive but is one of the weakest techniques (Dunlosky et al. 2013).

Debrief: which did you just do in the last 25 minutes?
